# Money managment section

## Prompt: Add a "Money Tracking" Section to My Existing Consistency & Productivity App

---

### CONTEXT & IMPORTANT INSTRUCTIONS

I already have a **consistency and productivity web app** built and running. I am NOT asking you to build a new app from scratch. I want you to **add a new section called "Money Tracking"** into my existing app.

This section should:

- Live as a **separate page/route** accessible from the app's existing sidebar navigation
- Match the **existing design system, colors, fonts, and UI style** of the app
- Use the **same state management and storage approach** already used in the app (localStorage or whatever is currently in use)
- Feel like a **native, built-in part of the app** — not something bolted on from outside
- NOT require any backend, bank sync, or external API integration — all data is entered manually by the user

Add a **"Money Tracking"** item to the sidebar navigation that routes to this new section. Inside this section, build everything described below.

---

### WHAT TO BUILD: THE MONEY TRACKING SECTION

This section is a complete personal finance management module with multiple sub-pages/tabs inside it. When the user clicks "Money Tracking" in the sidebar, they land on the **Money Tracking Dashboard** which has internal tabs or a sub-navigation to switch between:

- 📊 Dashboard (Overview)

- 💸 Expenses
- 🎯 Budget
- 🔄 Subscriptions
- 💳 Bills & Cards
- 📈 Reports
- 🏆 Goals

All sub-pages live inside the Money Tracking section without leaving it. The URL can follow a pattern like `/money-tracking`, `/money-tracking/expenses`, `/money-tracking/budget`, etc.

---

# SUB-PAGE 1: DASHBOARD (Overview)

This is the landing page when the user clicks "Money Tracking." It gives a full financial snapshot at a glance.

## Top Summary Cards (4 cards in a row)

- **Total Income This Month** — Net monthly income the user has set
- **Total Spent This Month** — Real-time sum of all expenses logged this month
- **Remaining Budget** — Income minus expenses. Color-coded: green if healthy, yellow if less than 20% remains, red if over budget
- **Upcoming Payments (Next 7 Days)** — Count and total amount of bills and subscriptions due within 7 days

## Spending by Category — Donut Chart

- A donut or pie chart breaking down current month spending by category
- Hovering a slice shows: category name, amount spent, percentage of total spending
- A color-coded legend below the chart

## Budget Progress Bars (per category)

- For every category with a budget set, show a horizontal progress bar

- Color logic: Green = under 70%, Yellow = 70–90%, Red = 90–100%, Dark Red with warning icon = over 100%
- Each bar shows: Category name, amount spent, budget limit, percentage used
- Clicking a category opens that category's expense list

## Monthly Spending Trend — Line Chart

- Line chart showing daily spending across the current month
- Toggle between: This Month, Last Month, Last 3 Months

## Upcoming Payments Widget

- List of all subscriptions and bills due in the next 30 days, sorted by soonest first
- Each row: Name, amount, due date, days remaining, category tag
- Urgency colors: Red = due within 1 day, Orange = within 3 days, Yellow = within 7 days, Gray = beyond 7 days
- A "Mark as Paid" button on each row that logs it as an expense automatically

## Recent Transactions

- Last 8 transactions with: date, merchant name, category icon, amount, payment method
- A "View All" link that goes to the Expenses sub-page

## Monthly Savings Rate

- Calculated as: (Income − Total Expenses) ÷ Income × 100
- Displayed as a percentage with a circular progress gauge
- Motivational message based on the rate (e.g., "Great! Saving above 20% is excellent." or "Try to cut back a little this month.")

## Quick Stats Row

- Average daily spending this month

- Biggest single expense this month
- Most visited merchant/payee this month
- Day of the week with highest average spending

---

# SUB-PAGE 2: EXPENSES

This is where users manually log and manage every expense.

## Floating "＋ Add Expense" Button

- Always visible in the bottom-right corner of the Money Tracking section
- Opens a modal/drawer with the Add Expense form

## Add Expense Form (Modal or Side Drawer)

Fields:

- **Amount** — Number input with currency symbol
- **Date** — Date picker, defaults to today
- **Category** — Dropdown with all categories (listed below)
- **Merchant / Description** — Text input (e.g., "Swiggy," "Amazon," "Electricity Bill")
- **Payment Method** — Dropdown: Cash, Debit Card, Credit Card (select which card), UPI, Net Banking, Other
- **Notes** — Optional free text
- **Tags** — Optional custom tags like "work," "family," "vacation" (user can type and add multiple)
- **Is this recurring?** — Toggle. If yes: frequency dropdown (Daily, Weekly, Monthly, Yearly) + optional end date

## Expense Categories (default list — fully editable by user)

🍔 Food & Dining · 🛒 Groceries · 🚗 Transportation · 🏠 Housing & Rent · 💡 Utilities · 📱 Mobile & Internet · 🏥 Healthcare · 💊 Pharmacy · 👗 Shopping · 🎬 Entertainment · 🎓 Education · ✈️ Travel · 💼 Business · 🐾 Pets · 👶 Family · 🎁

Gifts & Donations · 💰 Savings · 💳 Credit Card Payment · 🔔 Subscriptions · 🏋️ Health & Fitness · 📦 Other

## Expense List / Transaction History

- Full searchable, filterable table of all transactions
- **Search bar** — Search by merchant name, description, or tag
- **Filters panel:**
  - Date range (presets: This Week, This Month, Last Month, Last 3 Months, This Year, All Time — plus custom range picker)
  - Category (multi-select checkboxes)
  - Payment method (multi-select)
  - Amount range (min/max inputs)
  - Tags
- **Sort by:** Date (newest/oldest), Amount (high/low), Category (A–Z)
- **Bulk actions:** Select multiple rows → Delete selected, Export selected, Change category for selected
- Each transaction row: Checkbox | Date | Merchant | Category icon | Payment Method | Amount | Tags | Edit icon | Delete icon
- Click any row to expand and see full details inline

## Edit & Delete

- Edit any field of an existing expense
- Delete with a confirmation dialog
- For recurring expenses, when deleting ask: "Delete only this entry" or "Delete all future occurrences"

## CSV Import

- Button: "Import from CSV"
- Provide a downloadable template so users know the format

- After upload: show a preview table of data being imported, let user map columns if needed
- Confirm import, then add all valid rows

### Export

- Export filtered or all transactions as CSV or PDF
- Date range selector before export

---

## SUB-PAGE 3: BUDGET

### Set & Manage Budgets

- A settings-style page listing all categories
- For each category: an input field to set the monthly spending limit, and a toggle to enable/disable tracking for that category
- **Overall Monthly Budget** — An optional total spending cap across all categories
- **Rollover Budget toggle** — If enabled, unused budget from last month carries into this month

### Budget vs. Actual Table

- Columns: Category | Monthly Budget | Spent So Far | Remaining | % Used | Progress Bar
- Color coding per row matches the dashboard progress bar logic
- Summary totals row at the bottom
- Month selector dropdown to view past months' performance

### Over-Budget In-App Alerts

- When logging an expense pushes a category past 80% of its budget: show a yellow toast notification — "⚠️ You've used 83% of your Food budget this month."

- When it exceeds 100%: show a red toast — "🚨 You've exceeded your Groceries budget by ₹500."

### Smart Budget Suggestions

- After 2+ months of data, show a "Suggestions" card on this page
- Logic-based suggestions (no AI API needed), for example:
  - "You've overspent in Dining Out for 2 months in a row. Consider increasing your limit or dining in more."
  - "You've been under budget in Entertainment for 3 months. You could move ₹500 to Savings."

---

## SUB-PAGE 4: SUBSCRIPTIONS

A dedicated sub-page for tracking all recurring subscription services.

### Add Subscription Form

Fields:

- **Service Name** (e.g., Netflix, Spotify, Adobe)
- **Category** — Streaming, Music, Software, Gaming, News, Fitness, Education, Other
- **Amount**
- **Billing Cycle** — Monthly, Quarterly, Half-Yearly, Yearly
- **Next Due Date** — Date picker
- **Auto-renews?** — Yes/No toggle
- **Payment Method** — Which card or account it charges
- **Notes** — Free text
- **Icon/Logo** — Pick from preset popular service icons (Netflix, Spotify, YouTube, Amazon Prime, Disney+, Apple, Google, Notion, etc.) or upload a custom icon

### Subscriptions Overview

- **Total Monthly Cost** card — sum of all active subscriptions converted to monthly equivalent
- **Yearly Projection** card — total annual cost
- Grid of subscription cards, each showing: Logo, service name, amount, billing cycle, next due date, days until renewal, status badge (Active / Paused / Cancelled)
- Urgency highlight if due within 7 days

### Subscription Calendar / Timeline

- A visual timeline or mini calendar for the current month showing which subscriptions renew on which dates

### Manage Subscriptions

- **Edit** any subscription
- **Pause** — marks as paused, removes from upcoming payments until unpaused
- **Cancel** — marks as cancelled with a date; kept in history with a "Cancelled" badge
- **Mark as Paid** — logs it as an expense automatically and updates the next due date

### Subscription Analytics

- Pie chart: subscription spend by category
- Month-over-month total subscription cost trend
- Callouts: Most expensive, cheapest, and longest-running subscription

---

## SUB-PAGE 5: BILLS & CARDS

### Credit Card Management

### Add Credit Card

Fields:

- Card nickname (e.g., "HDFC Millennia")
- Card type: Visa, Mastercard, Amex, RuPay, Other
- Last 4 digits only (never store full card number)
- Credit limit
- Statement generation date (day of month, e.g., 15th)
- Payment due date (day of month, e.g., 5th of next month)
- Current outstanding balance (manually entered)
- Minimum due amount (manually entered)

## Credit Card Dashboard

- Cards displayed as styled card visuals (like a real card design)
- Each card shows: nickname, last 4 digits, card type icon, credit limit, current balance, available credit, credit utilization % with color coding (Green < 30%, Yellow 30–60%, Red > 60%), statement date, due date, days until payment due
- **Total Debt** across all cards
- **Total Available Credit** across all cards
- **Total Minimum Payments Due** this month

## Card Transactions

- Each card has its own transaction view (filtered from the main expense list by payment method = that card)
- Monthly statement view: filter transactions by billing cycle (statement date to statement date)

## Bill Management

## Add Bill

Fields:

- Bill name (Electricity, Water, Internet, Rent, School Fees, EMI, Insurance, etc.)

- Amount (or estimated range — min/max)
- Due date
- Frequency: One-time, Monthly, Quarterly, Half-Yearly, Yearly
- Category
- Payment method
- Auto-pay enabled toggle
- Notes

### Bills List

- All upcoming and past bills in a sortable table
- "Mark as Paid" button on each row (logs as expense automatically)
- Overdue bills highlighted in red
- Bills feed into the "Upcoming Payments" widget on the dashboard

---

## SUB-PAGE 6: REPORTS

### Monthly Report

- Dropdown to select any past month
- Shows: Total income, total expenses, net savings, savings rate %, top 5 merchants by spend, budget adherence summary, subscription costs that month, total number of transactions
- Spending breakdown table by category with amounts and percentages
- Charts: Donut (category split), Bar (daily spending), Line (cumulative spend vs. budget)

### Year-to-Date Report

- Month-by-month table: Month | Income | Expenses | Savings | Savings Rate
- Category trends: which categories grew or shrank month over month
- Annual savings projection based on average monthly savings so far

### Custom Date Range Report

- Date range picker (start date → end date)
- All the same metrics and charts for that custom period

### Export Reports

- Export any report as PDF (formatted, with charts rendered) or CSV
- A "Report History" section storing auto-generated monthly reports (generated on the 1st of each month)

---

## SUB-PAGE 7: GOALS

### Add Savings Goal

Fields:

- Goal name (e.g., "Emergency Fund," "New Laptop," "Vacation to Bali")
- Target amount
- Target date
- Current saved amount (manually updated anytime)
- Monthly contribution plan (how much user plans to save toward this goal each month)
- Icon/emoji for the goal

### Goals Dashboard

- Each goal displayed as a card with: icon, name, target amount, current saved, progress bar (%), target date, "On Track" or "Behind Schedule" status, monthly contribution needed to meet the deadline
- **Total across all goals:** Total target, total saved so far, total remaining
- A mini version of the top 2 active goals also appears as a widget on the main Money Tracking Dashboard

### Update & Manage Goals

- "Add Funds" button on each goal — opens a quick input to add an amount to current savings (and optionally logs it as a "Savings" expense)
- Edit goal details
- Mark goal as "Completed" with a celebration animation (confetti or checkmark animation)
- Archive completed goals — viewable in a "Completed Goals" tab

---

# NOTIFICATIONS & REMINDERS SYSTEM

This works app-wide within the Money Tracking section.

## Triggers for Notifications

- **Subscription renewal** — X days before due date
- **Credit card payment due** — X days before due date
- **Bill payment due** — X days before due date
- **Budget alert** — When a category crosses 80%, 90%, or 100% of its monthly budget
- **Monthly summary** — On the 1st of each month, a notification summarizing last month's finances
- **Unusual spending day** — If a single day's spending is more than 3× the user's daily average, show a heads-up

## How Reminders Work

- Use the **Web Notifications API** (browser push notifications) — request permission on first use
- Also show notifications inside the app via a **bell icon** in the Money Tracking section's sub-navigation
- Bell icon shows a red badge with unread count
- Clicking the bell opens a notification panel: list of all recent and upcoming alerts with timestamps and links to the relevant item

- "Mark all as read" button

### Notification Settings (inside Settings tab of Money Tracking)

- Global toggle: Enable/disable all Money Tracking notifications
- Per-type toggles (subscriptions, bills, budget alerts, etc.)
- Timing for reminders: Multi-select — 1 day before, 3 days before, 7 days before
- Notification history log with filter by type

---

## MONEY TRACKING SETTINGS (Sub-section inside the module)

Accessible via a Settings icon or tab within Money Tracking. Does NOT interfere with the main app's settings.

- **Currency** — Select preferred currency (INR, USD, EUR, GBP, AED, etc.)
- **Monthly Income** — Update net monthly income
- **Category Management** — Add, edit, delete, reorder categories. Add custom categories with an emoji picker and custom color
- **Notification Preferences** — As described above
- **Data Management:**
  - Export all Money Tracking data (JSON or CSV)
  - Import previously exported data (JSON) to restore
  - Clear all Money Tracking data (with strong "type DELETE to confirm" dialog)
- **Number Formatting** — Thousands separator style, decimal places (0/1/2), currency symbol position

---

## ADDITIONAL FEATURES TO INCLUDE

### Financial Health Score

- A score from 0–100 shown on the main Dashboard as a circular gauge
- Calculated from: savings rate, budget adherence, credit card utilization, subscription-to-income ratio, consistency of expense logging
- Color: Red (0–40), Yellow (41–70), Green (71–100)
- Breakdown card showing how each factor contributes
- "How to improve" tips based on weak areas

## Cash Flow Calendar

- A full monthly calendar view (accessible from the Dashboard)
- Each date shows: total spending for that day (heatmap intensity — lighter = less, darker = more)
- Due date markers for bills and subscriptions appear on the relevant dates
- Click any date to see a list of all transactions for that day

## Split Expense Tracker

- Log shared expenses with friends or family
- Fields: Total amount, who paid, people involved, split method (equal / custom percentage / custom amounts)
- Track who owes you money and who you owe
- "Mark as Settled" button
- This is purely a tracker — no payment integration

## Spending Streaks (ties into the app's existing consistency system)

- Track consecutive days the user has logged at least one expense
- Display the current streak prominently on the Dashboard (e.g., "🔥 12-Day Logging Streak!")
- **Connect this streak to the main app's consistency/habit tracking system** — Money Tracking logging counts as a daily habit the user can track

- Milestone badges: "7-Day Streak," "30-Day Streak," "Budget Ninja (under budget 3 months in a row)," "Zero Credit Debt Month," "Saver of the Month (saved 30%+)"
- Badge display on a small Achievements card on the Dashboard

### Multi-Currency Expense Logging

- When logging an expense, user can select a different currency if needed (e.g., for travel)
- Manually enter the exchange rate at the time
- The expense is stored in the foreign currency but converted and displayed in the home currency throughout reports
- Original currency shown as a note

---

## INTEGRATION WITH THE EXISTING APP

This is critical. The Money Tracking section must feel like a natural part of the existing consistency and productivity app, not a separate product.

- **Sidebar Navigation** — Add "💰 Money Tracking" as a nav item in the existing sidebar, in a logical position (likely after habits/tasks sections)
- **Main App Dashboard Widget** — Add a small "Money Summary" widget on the main app dashboard showing: this month's spending, remaining budget, and next upcoming payment. Clicking it navigates to the Money Tracking section
- **Habit Integration** — "Log your expenses today" as a trackable daily habit/consistency task in the main habit tracker, connected to the Money Tracking streak
- **Shared Design System** — Use the exact same: color variables, font, border radius, shadow style, button styles, card styles, spacing scale, and dark/light mode as the rest of the app. Do not introduce new design inconsistencies
- **Shared Storage** — Store Money Tracking data in the same localStorage structure used by the rest of the app, under a clearly namespaced key like `moneyTracking_expenses`, `moneyTracking_budgets`, etc., to avoid conflicts

- **Shared Notification System** — If the main app already has a notification/alert system, plug Money Tracking alerts into it rather than creating a separate one

---

## UX & TECHNICAL REQUIREMENTS

- The Money Tracking section is fully **self-contained** — adding it should not break any existing functionality
- All data persists in **localStorage** under namespaced keys
- Use **Recharts or Chart.js** for all data visualizations
- All forms have **inline validation** with clear error messages
- Use **toast notifications** for success/error feedback (e.g., "Expense added ✅," "Budget saved ✅")
- **Empty states** — When no data exists yet in any sub-page, show a helpful empty state with an illustration/icon and a call to action (e.g., "No expenses yet. Add your first one to get started!")
- **Loading skeletons** — Use shimmer/skeleton placeholders while data is being read from storage
- The section must be **fully responsive** — works on desktop, tablet, and mobile within the existing app layout
- On mobile, the sub-navigation inside Money Tracking should switch to a **scrollable horizontal tab bar**
- Use **date-fns** for all date manipulation and formatting
- All monetary values stored as integers (paise/cents) internally to avoid floating-point errors, formatted only for display
- A **global keyboard shortcut** (Ctrl/Cmd + Shift + E) opens the Quick Add Expense modal from anywhere in the app

---

## INSTRUCTIONS FOR IMPLEMENTATION

1. First, examine the existing app's codebase — understand the current routing structure, state management approach, component library, design tokens, and

storage pattern

2. Add the Money Tracking route to the existing router
3. Add the Money Tracking nav item to the existing sidebar component
4. Build the Money Tracking module as a self-contained folder (e.g., `/src/sections/money-tracking/`) with its own sub-components, hooks, and utilities
5. Implement the sub-navigation (tabs or inner sidebar) for the 7 sub-pages listed above
6. Build each sub-page completely and fully — do not skip any feature listed in this prompt
7. Add the Money Summary widget to the main app dashboard
8. Connect the expense logging streak to the main app's habit tracking system
9. Test that adding this section does not break any existing functionality

Build everything described above completely. Every feature in this prompt must be implemented and working. Do not cut corners or skip sections.
